

Client: Leighs Construction

Completion: 2016

System: 13,500m² Matacryn Carpark deck waterproofing system

SWP Commercial worked closely with Buchan Group and Leighs Construction right from the design stage and developed a custom designed Matacryn Carpark deck waterproofing system.

This multi award winning shopping centre redevelopment delivers not only one of the best looking carpark deck waterproofing systems but one that will be performing and protecting this shopping centre's structure and shops below for many years to come.

The 13,500m² project was installed over two stages as the old shopping centre was progressively knocked over and rebuild this meant we needed a Waterproofing system that could being installed year round in both in the freezing cold Christchurch winter and hot Christchurch summer to be able to meet the construction program a PUMMA system was the only option with it's rapid cure, -20 to +35 degrees install temperature range and allowing the complete system to be installed in 1 day and ready for use just 2 hours after completion allowing other trades back onto completed areas on busy and active construction site
