

Client: Peter Camp Builders

Completion: 2016

System: RoofLogic FiberTite Xtreme Warm Roof, 3000m²

The old door hardware manufacturing building on Portsmouth Road had to be transformed into a high tech Weta digital workshop. The addition of the of a mezzanine floor and the height of the existing ceiling did not allow for the traditional under-slung insulation. Insulation was badly needed in what use to be a cold factory.

Because PCB and SWP had already worked through similar solutions in Wellington and for the same client in Miramar, PCB and SWP teamed up again to give the client the best solution in the market.

The old roof had to be trimmed, fastened and a few other tricky additions made by the PCB team. But after a very cold winter in one of the windiest corners of Wellington the SWP team installed a robust warm roof solution that will stand the test of time.
